

As far as the class notes, we discussed we are going to be making a reflective journal at the end of the course to document what we have learned. We also discussed the invasion of privacy that has been implemented by the state and was instructed to watch “Snowden” over the weekend. We also discussed the AI 900 Certification and its benefits of completion, although it was not a requirement for the course (I am taking it by the way). The labs and materials are already published for the entire semester so they can be completed as early as possible. Even if we don’t take the certification we still have to do the labs related to the certification.

We also discussed how AI is being abused on a mass scale, which I have noticed will be a revolving topic in the course. AGI is when the AI can decide for itself and generate on its own. I also learned that anything can be trained. AI models have no emotions or emotional attachments, but they fix the mundane tasks that are repetitive by humans. If it can be automated, it eventually will be. Data can also be used or abused at various levels for glory or deviltry.

Sales and marketing is what fueled AI research. Sites monitor how long you are on pages and what you stop to scroll on to determine what ads to send. All emotions are essentially already predestined and manipulated to some sort. Bias is prevalent and expected because humans are responsible for building these systems. We also discussed who would be responsible for the failure of these AI systems even in the case of unfortunate death. We ultimately determined that nobody could single-handedly be responsible for its failures or be held liable due to its gray area. We also learned that using public networks relinquishes data consent. We also discussed the dangerous of deep fakes and were instructed to watch “House” and “Suits”.
